Portfolio

SUMMARY

Final-year AI & Data Science student and aspiring AI Product Manager, building two AI-driven products end-to-end. Founding and developing InvAI, a multi-tenant SaaS platform for supply-chain intelligence with a RAG-based AI assistant. Identified a margin shortfall in the pricing model and redesigned the monetization strategy to correct it. Leading a four-member team building CreditSaathi, a credit-scoring platform for gig-economy and MSME borrowers, using cross-segment transfer learning to address data scarcity and a built-in fairness audit to reduce bias. Co-authored a published research paper on AI's impact on the Indian economy.

SKILLS

Python, SQL, Machine Learning, RAG, Prompt Engineering, Vibe Coding, APIs, Product Management, Product Strategy, Agile Methodology (Scrum), Figma, Data Analytics, Stakeholder Management, Team Management

PROJECTS

InvAI — AI-Powered Supply Chain Intelligence Platform (SaaS) 04/2026 – Present

Solo Founder & Product Lead

- Founding and building InvAI, an 11-feature multi-tenant SaaS platform across 3 subscription tiers. Caught a margin shortfall in the premium AI-tier pricing before launch and redesigned the monetization strategy to fix it.
- Made the core architecture decisions, prioritizing secure multi-tenant data isolation and a full purchase-order/inventory workflow to support franchise-scale customers, and sequenced a RAG-based AI assistant as phase 2 of a 4-phase product roadmap.
- Ran a self-directed security review and remediated 6 critical vulnerabilities before any external exposure; authored an AI Product Requirements Document for the platform.

CreditSaathi — AI-Driven Alternative Credit Scoring Platform 08/2026 – Present

Team Lead (4-member team)

- Originated the idea and lead a team building CreditSaathi, an alternative credit-scoring platform for gig-economy and MSME borrowers underserved by traditional models, from ideation through formal panel evaluation.
- Identified an underserved market opportunity by merging two adjacent FinTech niches, gig-economy credit scoring and MSME alternative-data creditworthiness, into a single unified product concept.
- Selected cross-segment transfer learning to address data scarcity across these segments; currently developing a peer-relative, cluster-normalized scoring model with a built-in fairness audit and borrower-facing transparency features

EDUCATION

Bachelor of Technology in Artificial Intelligence and Data Science 2023 – 2027 | Pune, India

Ajeenkya DY Patil University

ACHIEVEMENTS

- **Outreach Coordinator, National Service Scheme (NSS), Ajeenkya DY Patil University** — leading 200 volunteers; recipient of the Innovation and Creativity Award (2025-2026)
- **Co-authored a published research paper, "The Impact of AI in the Indian Economy"** — in Progress in Economics Research, Nova Publications (September 2025)
- **Winner, Best Social Impact Award, HackVerse Hackathon** — for an interactive web platform teaching underage children about their legal rights (2025)
- **President, Literature Club** — Ajeenkya DY Patil University (2023-2025)

CERTIFICATES

- **Business Intelligence** — Google Career Certificates (November 2024)
- **Generative AI for Everyone** — DeepLearning.AI (September 2026)
- **Master Product Management by Actually Building a Product** — Udemy (Expected October 2026)
- **Complete UI/UX Design Course** — Udemy (Expected October 2026)
